Amendments to the Claims:

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

- (Currently Amended) A fuel cell gas diffusion layer comprising a hydrophilic surface layer baving a thickness of no more than 4-mieron <u>0.5 micron</u>, and, thereunder, a hydrophobic second layer comprising a fluoropolymer having a thickness of at least 5 microns.
- (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophobic second layer comprises dispersed particles of carbon and a fluoropolymer.
- (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophobic second layer comprises a carbon fiber construction coated with a fluoropolymer.
- (Original) The fuel cell gas diffusion layer according to claim 1 additionally comprising a supporting third layer underlying said second layer.
- (Original) The fuel cell gas diffusion layer according to claim 4 wherein said supporting third layer comprises a carbon fiber construction coated with a fluoropolymer.
- (Original) The fuel cell gas diffusion layer according to claim 2 additionally comprising a supporting third layer underlying said second layer.
- 7. (Original) The fuel cell gas diffusion layer according to claim 6 wherein said supporting third layer comprises a carbon fiber construction coated with a fluoropolymer.
- (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophilic surface layer comprises functional groups containing Si or a metal.

Application No.: 10/666626 Case No.: 58446US002

 (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophilic surface layer comprises functional groups containing Si.

- 10. (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophilic surface layer comprises functional groups containing Si and O.
- 11. (Original) A roll good comprising the fuel cell gas diffusion layer according to claim 1.
- 12. (Original) The fuel cell gas diffusion layer according to claim 1 wherein said hydrophilic surface layer is present on less than all of said hydrophobic second layer, according to a pattern.
- 13. (Withdrawn) A method of making a fuel cell gas diffusion layer comprising the steps:
 - a) providing a carbon fiber construction having an upper surface;
 - coating at least said upper surface of said carbon fiber construction with composition which comprises a fluoropolymer;
 - exposing said upper surface to at least one plasma so as to generate a hydrophilic surface layer having a thickness of no more than 1 micron.
- 14. (Withdrawn) The method according to claim 13 wherein said step c) comprises steps d) and e):
 - d) exposing said upper surface to a first plasma; and
 - e) exposing said upper surface to a second plasma.
- 15. (Withdrawn) The method according to claim 13 wherein said plasma is of species including at least one selected from the group consisting of: oxygen, nitrogen, nitrogen dioxide, nitrous oxide, ammonia and sulfur dioxide.
- 16. (Withdrawn) The method according to claim 15 wherein said plasma is additionally of species including at least one selected from the group consisting of: silanes, siloxanes and organometallics.

17. (Withdrawn) The method according to claim 14 wherein said first plasma is of species including at least one selected from the group consisting of: silanes, siloxanes and organometallics, and wherein said second plasma is of species including at least one selected from the group consisting of: oxygen, nitrogen, nitrogen dioxide, nitrous oxide, ammonia and sulfur dioxide.

- 18. (Withdrawn) The method according to claim 14 wherein said first plasma is additionally of species including at least one selected from the group consisting of: oxygen, nitrogen, nitrogen dioxide, nitrous oxide, ammonia and sulfur dioxide.
- 19. (Withdrawn) The method according to claim 14 wherein said first plasma is of species including a silane and oxygen and wherein said second plasma is of species including oxygen.
- 20. (Withdrawn) The method according to claim 19 where said silane is tetramethylsilane.
- 21. (Withdrawn) The method according to claim 13, additionally comprising the step of:
 - f) partially covering said upper surface with a mask having windows according to a pattern such that said hydrophilic surface layer having a thickness of no more than 1 micron is applied according to said pattern.
- 22. (Withdrawn) The method according to claim 13 wherein said carbon fiber construction is provided as a roll good and said step of exposing said upper surface to at least one plasma is performed in continuous roll-to-roll fashion.
- 23. (Withdrawn) The method according to claim 13 wherein said step c) of exposing said upper surface to at least one plasma is carried out at sub-atmospheric pressures.
- 24. (Withdrawn) The method according to claim 13 wherein said step e) comprises exposing said upper surface to a plasma of silane (SiH4), oxygen, and essentially no other species.

Application No.: 19/666626 Case No.: 58446US902

25. (Withdrawn) The method according to claim 24, additionally comprising the step of:

f) partially covering said upper surface with a mask having windows according to a pattern such that said hydrophilic surface layer having a thickness of no more than 1 micron is applied according to said pattern.

- 26. (Withdrawn) The method according to claim 24 wherein said carbon fiber construction is provided as a roll good and said step of exposing said upper surface to at least one plasma is performed in continuous roll-to-roll fashion.
- 27. (Withdrawn) The method according to claim 24 wherein said step e) of exposing said upper surface to at least one plasma is carried out at sub-atmospheric pressures.
- 28. (Withdrawn) The method according to claim 13 additionally comprising the step of:
 - g) exposing said upper surface to at least one priming plasma of species including at least one selected from the group consisting of: oxygen, nitrogen, nitrogen dioxide, nitrous oxide, ammonia and sulfur dioxide prior to step c).
- 29. (Withdrawn) The method according to claim 13 additionally comprising the step of:
 - g) exposing said upper surface to at least one priming plasma of species including at least one selected from the group consisting of: oxygen, nitrogen, nitrogen dioxide, nitrous oxide, ammonia and sulfur dioxide prior to step d).
- 30. (Original) A fuel cell electrode comprising the fuel cell gas diffusion layer according to claim 1 and a layer of fuel cell electrode catalyst in contact with said hydrophilic surface layer.
